Invoice Checker API Documentation

📌 Overview

The **Invoice Retrieval API** allows clients to query invoice details using an invoice number and date. It returns structured information about the invoice, including supplier details, amounts, and item breakdowns.

To successfully invoke this API, you must first generate an **access token** via the Authorization API. This token must be included as a Bearer token in the Authorization header of your API request.

This guide includes:

- How to generate the access token
- How to use the token in the API request
- Request/response examples
- Error handling
- Sample data section for testing

▶

🔐 Step 1: Generate Access Token (Authorization API)

✅ Step 2: Invoke Invoice Checker API
