VAT Withholding PRN Generation

Simulate API

Documentation

Overview

This API endpoint submits Value Added Tax (VAT) withholding tax transaction data to the Kenya Revenue Authority and generates a Payment Reference Number (PRN) to facilitate payment of the withheld tax. The payload contains header information summarizing the entire transaction and detailed breakdowns of individual withholding transactions.

For an VAT Withholding Certificate to be issued to the withholdee, the generated PRN needs to be paid for. The withholding certificate generation is automated from the iTax system.
